

## ***Meet us in Dusseldorf at the Wire 2010***

**You are kindly invited to visit us in our stand 12 A15.**

**We will have some new test equipment in our stand**

- 1) The NEW Hot Set Oven with a view.

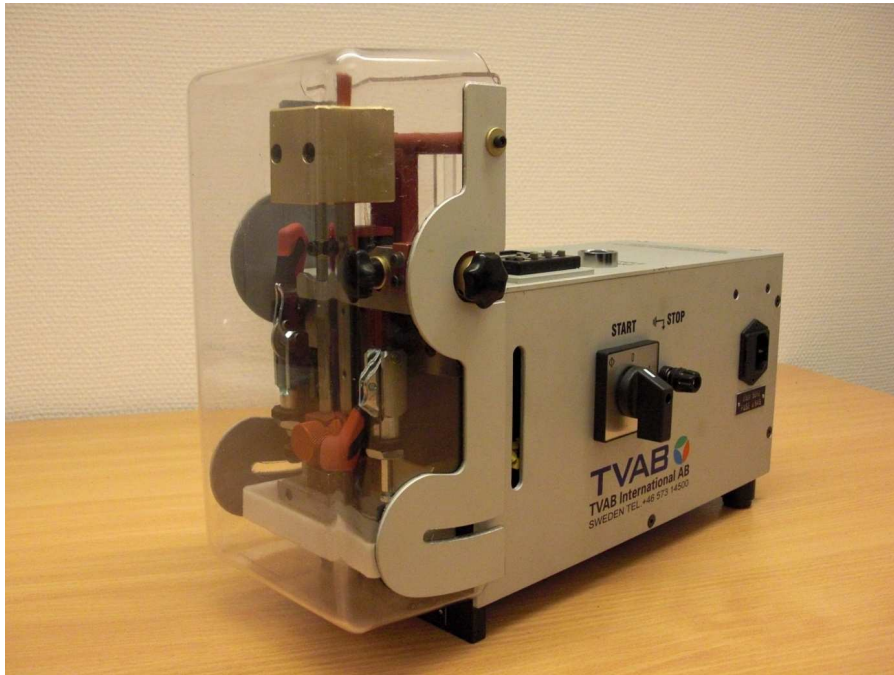

# Hot Set Oven with a view

**PTL**  
brand

This oven will give a clear picture and fast result of each hot set measurement. Now on show in our booth in Hall 12 stand no. A15. The new **upgraded PTL-Vision 6050 HS** Hot Set oven does require minimal labor. You simply put the samples in the oven and the installed system will do the job for you. As soon as the door is closed a PC controlled digital camera will take a picture of the samples. After completion of a test cycle of usually 15 minutes, the camera will make a picture again. The PC will store the pictures on the hard disc and calculate the elongation under load in accordance with IEC 60811-2-1 and enter this information in the PC. The oven will be supplied with a laptop and the required software is integrated in the system.

The TVAB scrape abrasion tester. This abrasion equipment is so precise that it has set the standards for ISO 6722-1. It has been designed to test the durability of cable insulation under extreme conditions and measures very specific durability variables.

2) Compounds.

Come, see and discuss the new developments for wire & cable compounds for rolling stock (Railways), Solar, off shore and shipboard with Ron Goethals.

3) Heat Shrink Technology.

Jacob Steendam will be glad to introduce you to the latest developments in the heat shrink technology field.

**We are looking forward to meet you in Dusseldorf. If you like to make an appointment, just let us know.**
